«Χτίζω Λέξεις» (Building Words): The new NEUROLINGO’s dictionary by KONDYLI publications

Wed, 22/09/2010 - 14:44 — webmaster

This original dictionary presents the ways in which the Modern Greek words are "built", what their constituents are and how they combine.

It contains approximately 220 entries, and more specifically 140 first constituents and 80 second constituents. It includes meanings, word lists, examples, synonyms-antonyms, and comments on spelling and etymology. It is an important source of information about the Modern Greek vocabulary, and it can be particularly useful for creating and solving language exercises. The dictionary was developed through electronic processing and specialised lexicographical tools by Neurolingo.

A presentation of the dictionary was held on September 16th, 2010 at the bookshop IANOS, in Athens.
